Strategic Food Sourcing

Report and Consultation

Food sourcing is a crucial operational process for local food shelves. It can have significant implications on an organization's budget and the types of food offered to the community.

Because the food sourcing environment is ever changing, FFEN recommends a food sourcing "health-check" every 6 months. This regular review can identify potential changes in product mix, review historical trends and create a proactive plan for a consistent shopper experience. FFEN's report references the most important foods and experiences for shoppers as outlined in the 2022 Minnesota Food Shelf Survey of more than 7,000 people.

Data privacy: Food sourcing data for each food shelf is provided directly from its corresponding food bank(s). Food shelves that provide local purchasing data to FFEN will receive a more complete report. Food shelf identifying information remains confidential and is aggregated anonymously to inform broader sector-level data insights.

In this report you'll see customized Strategic Food Sourcing insights. Your report includes:

- Overview of your site's food sourcing metrics
- A look at how your site meets shopper needs for fresh produce, protein, and dairy
- A review of top food costs and how your site stretches donor dollars for your food budget
- Trendlines across the last three years

Compare your local data with that of food shelves across the state:

- Learn the makeup of food shelves in this Strategic Food Sourcing round
- See how MN food shelves stack up with the full set of data insights
- Catch the Food Sourcing Data Insights Webinar
- Access all the links here

Resources:

- Get the definition of terms used in this report
- Wanna know if eggs are dairy or protein? Learn about categories

Strategic Food Sourcing Insights: Stewarding Donor Dollars

Foundation For Essential Needs

Here you'll get a deeper view into the food categories that influence cost per individual the most, including the total category cost as well as the individual items within each category. Depending on budget parameters, it can be valuable to consider what five categories have the highest cost and how that aligns with sourcing priorities at the food shelf.
